- Tours can be made available for offline viewing and sent out on CD-ROMs.

Why Use a VR Tour?

The concept of "consumer orientation" is getting more traction in all industries. Traditional media cannot provide consumers with an effective interactive experience. In contrast, VR technologies offer a range of interactive modes for consumers, such as the 180 or 360 degree interactive panoramic image and videos. In this way, consumers have the power to select what they want to view, in other words, what is relevant to them.

VR2020™ makes your website come to life and allows your customers and partners to immerse and interact within a media rich, comprehensive, informative, VR experience that they control.

 No HTML Programming or Coding skills required.

No HTML, Programming or Coding skills needed to create or manage the most dynamic VR Tours. Just add your pictures, files, text and click!

What is a VR Tour?

A virtual tour (or VR Tour or Virtual Reality Tour) is an interactive virtual simulation of an existing location, usually comprising 2D panoramic images, a sequence of hyperlinked still or video images of the location, as well as other multimedia elements such as sound narration, text, print files, email-links, web-links and instant communications such as VoIP that is navigated by the user.

Virtual tour viewing evokes an experience of moving through the represented space and can offer a real world perspective of your city and/or property(s) in a virtual mode.
